Portland Incinerator Appeal – 14 December 2023

*In 1, 2 and 3 below - reference to using covered walking-floor HGV wagons with capacity for 24 tonnes - with a pay load of 24 tonnes, the whole lorry weight will be 44 tonnes*

*In 3 below - ES Tech states 25 deliveries per day – resulting in 50 vehicle movements*

*In 4 below Statement of Case states 40 HGV trips (80 movements)*

1 Portland\_ERF\_ES\_Technical\_Appendix\_G\_Health\_erratum.pdf

3.1.2.2 Movements (page 14)

The plant will require an average of 544 tonnes of RDF per day for continuous operation, when processing 22.7 tonnes per hour, although this will vary according to the calorific content of the RDF up to an estimated 606 tonnes per day. In order to provide a worst-case estimate of vehicle deliveries, it has been assumed that the RDF would arrive loose in a covered walking floor HGV wagon carrying 24 tonnes per vehicle.

2 ES Ch11 Traffic.pdf

11.18 To ensure a robust worst-case assessment, it was assumed that RDF would arrive loose using a covered walking-floor HGV wagon carrying 24 tonnes per vehicle.

3 ES Tech Appdx L1 Traffic and transport pt1.pdf

6.14 With a capacity of 202,000tpa and operating 8000 hours per year, 24 hours a day, the plant will require 606 tonne per day of RDF. This would normally arrive loose using a covered walking floor HGV Wagon, the standard vehicle for the transport of RDF, carrying 24 tonnes per vehicle. In order to service the plant 25 deliveries of RDF would need to occur per day resulting in 50 vehicle movements.

4 Powerfuel Statement of Case for Appeal dated 11.08.23 Pg6

1.19 However, to allow for variations in the total amount of RDF required per day, and ensure a realistic worst-case assessment, the EIA has been based on a total of 40 HGV trips each way (80 HGV movements in total).
